**Subject:** S Jones comments on the RDX assessment

Hi all,

Attached here is the RDX toxicological review and supplemental information documents that incorporates edits and comments from my review. Overall, the documents are well-written and clear. Your decisions were well-supported and arguments well-thought out. Also, your MOA write-ups were nicely done. I commend you on the implementation of post-hoc study quality evaluations and lit search inclusion/exclusion criteria...both well done!

In the tox review, I have included a number of comment bubbles with various questions and recommendations, and in some places, alternative text or modifications. Please note that I was unable to fully complete my review as my brain has now stopped working in the capacity that is needed to adequately review an assessment. I have read all parts of the tox review **with the exception of the** 1) executive summary, 2) cancer text in hazard ID and dose-response chapters, and 3) ten pages (2-8 to 2-17) in Chapter 2 on noncancer dose-response. I went as far as I could today. I plan to send comments on those pieces as soon as I can.

In the supplemental, I have included a few comments and edits in various places in the earlier appendices. I did not review the PBPK and dose-response appendices.

A few items of note:

# Deliberative Process / Ex. 5

# **Deliberative Process / Ex. 5**

If you have any questions or concerns, please let me know.

Enjoy!  
Samantha
